KAUFMAN FIELD GUIDES - Home

This slim and graceful hawk is a common sight over grasslands of the Great Plains and the west, but only in summer: every autumn, most individuals migrate to southern South America. Although Swainson's Hawk is big enough to prey on rodents, snakes, and birds (and does so, while it is raising young), at most seasons it feeds heavily on large insects instead. Flocks are often seen sitting on the ...

Male Scarlet Tanagers seem almost too bright and exotic for northeastern woodlands. These birds are fairly common in oak forests in summer, but they often remain out of sight as they forage in the leafy upper branches. Sometimes in spring, when the Scarlet Tanagers have just arrived from their winter home in South America, a late freeze will force them out in the open as they search for ...

Most people know a bat when they see one: It looks something like a mouse with wings. There are about 18 families of bats globally, but only one family of bats predominates in Missouri: the evening bats (Vespertilionidae). The bats in our state are all relatively small, usually with prominent ears. If you want to be able to identify bats to species, it is good to know some basic bat anatomy.
