Aristotle deals with this question, so reminiscent of Apo. I 4–5, in PA I 4, but only after he has introduced a new way of thinking about differentiae and division appropriate for investigating animals. After discussing his recommendations regarding the use of logical division in biology, we will return to look at his answer.

Aristotle's Biology (Stanford Encyclopedia of Philosophy)

Biology is the scientific study of life. It is a natural science with a broad scope but has several unifying themes that tie it together as a single, coherent field. For instance, all organisms are made up of cells that process hereditary information encoded in genes, which can be transmitted to future generations. Another major theme is evolution, which explains the unity and diversity of life.
