Clinical significance. Compression, obstruction or inflammation of the pancreatic duct may lead to acute pancreatitis. The most common cause for obstruction is the presence of gallstones in the common bile duct, a condition called choledocholithiasis. Obstruction can also be due to duodenal inflammation in Crohn's disease. A gallstone may get lodged in the constricted distal end of the ampulla ...

Gross anatomy Origin. The lateral femoral cutaneous nerve is formed by the posterior divisions of L2 and L3 spinal nerves (whereas the anterior divisions of these nerve roots contribute to the obturator nerve). The nerve emerges from the lateral border of the psoas major muscle inferior to the iliolumbar ligament and then courses laterally around the iliac fossa on the anterior surface of the ...

The acetabulum (plural: acetabula) is the large cup-shaped cavity on the anterolateral aspect of the pelvis that articulates with the femoral head to form the hip joint.. Gross anatomy. All three bones of the pelvis (the ilium, ischium, and pubis) together form the acetabulum. The three bones are initially separated by a Y-shaped triradiate cartilage that begins to fuse after puberty.

The clavicle, or collarbone, is a slender, S-shaped long bone approximately 6 inches (15 cm) long that serves as a strut between the shoulder blade and the sternum (breastbone). There are two clavicles, one on the left and one on the right. The clavicle is the only long bone in the body that lies horizontally.Together with the shoulder blade, it makes up the shoulder girdle.
