An induction motor or asynchronous

Get Free Electric Machinery And Control Prentice Hall Series In

motor is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor can therefore be made without electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.

International Trucks for sale in Australia - trucksales.com.au

A transmission is a machine in a power transmission system, which provides controlled application of power. Often the term 5-speed transmission refers simply to the gearbox, that uses gears and gear trains to provide speed and torque conversions from a rotating power source to another device.. The term transmission properly refers to the whole drivetrain, including clutch, gearbox, prop shaft ...
