Global Warming - Solutions to solve global warming

But there are other causes of global warming, too. While carbon dioxide takes up most of the headlines, there's another greenhouse gas that's seriously warming our planet: methane. It's responsible for about 20% of global warming, according to National Geographic, and a big portion of methane comes from cows (more on that later).

The cost and benefits of global warming will vary greatly from area to area. For moderate climate change, the balance can be difficult to assess. But the larger the change in climate, the more negative the consequences will become. Global warming will probably make life harder, not easier, for most people.

Climate Q&A - Why is global warming a problem?

Because we are already committed to some level of climate change, responding to climate change involves a two-pronged approach: Reducing emissions of and stabilizing the levels of heat-trapping greenhouse gases in the atmosphere ("mitigation"); Adapting to the climate change already in the pipeline ("adaptation").
