When you are finished, check with a classmate to see if you have the same information. 1. Sexual reproduction combine ____genes____ from a mother and a father making a

Lesson 4.3: Life Science Reproduction & Meiosis

In sexual reproduction, the male and female organs produce male and female gametes, whose fusion results in a zygote. After fertilization of the egg, the ovary becomes a seed and ovules become fruits. Seed dispersal is necessary to separate the seed from the parent plant so that the seed can grow into a new plant. Answer key: (A) (C) (A) (C) (C) ...

Skills Worksheet Active Reading

Sexual Reproduction. Sexual reproduction involves two parents. As you can see from Figure below, in sexual reproduction, parents produce reproductive cells—called gametes—that unite to form an offspring. Gametes are haploid cells. This means they contain only half the number of chromosomes found in other cells of the organism.
